

5/14:

I hope this email finds you well. I am writing to provide an update on the Green Team's group project as of our meeting on May 14, 2024. In this meeting, we assigned roles with Jalen Freeman serving as Scrum Master, Alexis Pio as the HTML Specialist, Cruz Gallegos handling JavaScript, Decan McCall focussing on REST APIs, and Dustin Erickson specializing in MySQL. We've established our communication channels via Discord for quick updates, Trello for rolling information, and Git for version control. Our next team meeting is scheduled for the same time next week, and Jalen is also tasked with drafting a collaborative 1000-word design specification.

5/21:

Our team has made some progress this week. Jalen Freeman has been keeping the team updated via Discord and has started the Design Specification Document. Alexis Pio has begun working on the HTML, and Cruz Gallegos has started the JavaScript portion of the project. Moving forward, we will continue developing the Wordle project, check our code into Git, and refine the Design Specification Document. Each of the team members also mentioned that they would get further progress made during this Memorial day weekend. Our next meeting is scheduled for the same time next week, with ongoing communication through Discord.

5/28:

This week was full of individual progress regarding each team member's specific role. Each member of the team indicated that they had made progress on coding their focus of the project. Alexis brought forward a few questions about what falls under his workload, but we discussed them with Cruz. A few of the team members also stated that, while they had got a start, they weren't sure where to go from there. That being said, the team is aware that you have made yourself available for questions regarding the project during the upcoming week. And, we are going to focus on linking our work together this week during our meeting.

6/05:

This week the team has made some progress and we are hoping to have all the code into github soon. Jalen Freeman has submitted the Design Specification Document and is waiting for feedback to clean it up and complete the final draft. Dustin posted some code to the Discord chat that Jalen Freeman submitted to GitHub. Devan was having issues with the REST API but is planning to work on it in the next few days. Alexis Pio pushed a new version of the HTML to Github with a clean look to the UI. Cruz has pushed his javascript code and is working on cleaning it up as we move along.

6/10:

Presentation day tomorrow, the team met to review results and practice presentation order and who is covering what. Jalen Freeman will handle the intro as well as the initial demonstration of the tool, how to set it up, and how it interacts with the database. Jalen Freeman 'recoded' most of the project and got things running and communicating with each other, as well as doing some debugging to get most of the aspects of the project as described. The tool should have everything necessary except for the ability to check if each guess is a real word. Following the demo, Cruz will describe how the javascript code interacts with the REST API. He will then pass

it along to Devan, Dustin, and Alexis who will discuss some of the ways in which we could improve the project, our team organization, and some of the challenges we endured. Devan also completed the Interface Specification Document and Alexis completed the testing document and both were pushed to the github in the 'Docs' folder. Jalen Freeman completed the weekly scrum report document and added it to the github as well. Jalen also marked all items as complete in the Trello board.
